

1   **ABSTRACT**

2           A TV receiving aerial having a dual antenna set and a lamp is provided,  
3   including two antennas, a key pad, at least one light source, a lamp shade and a  
4   circuit board; wherein the light source is exposed over the unit body and engulfed  
5   by a lamp shade. The lamp can provide normal lighting and night light to  
6   facilitate the tuning of the TV receiving aerial. When the viewer turns on the  
7   lamp through the key pad control, the lamp driver circuit is enabled to supply DC  
8   current to the light source to give out light and brighten the surrounding area of  
9   the lamp shade. The TV receiving aerial is capable of receiving UHF and VHF  
10   channels, as well as cable channels through a cable switch.
